## OBJECTIVE

Adaptive and tech-driven BCA student with practical experience in Full-Stack Web Development (MERN stack) and AI integration. Proficient in building responsive frontend interfaces using React, scalable backend architectures with Node.js, and implementing core programming logic in Java, C++, and Python. Seeking a challenging internship to build scalable web applications and leverage modern AI tools to optimize development workflows.

## TECHNICAL SKILLS

- **Frontend Web:** React.js, JavaScript (ES6+), HTML5, CSS3, Responsive Design
- **Backend & Databases:** Node.js, Express.js, Google Sheets API (Backend integration)
- **Programming Languages:** Java, C++, Python, C
- **AI & Productivity Tools:** Advanced Prompt Engineering & Workflows (Gemini, Claude, Grok), AI-assisted debugging
- **Tools & Developer Ecosystem:** Git, GitHub, VS Code, Netlify, NPM
- **Core Computer Science:** Object-Oriented Programming (OOP), Data Structures (Arrays, Stacks, Vectors), API Design

## TECHNICAL PROJECTS

### AI Virtual Mouse System (Computer Vision)

- **Technologies:** Python, OpenCV, MediaPipe, PyAutoGUI
- **Key Deliverables:** Developed a touchless human-computer interaction system by mapping hand gestures to mouse actions. Engineered real-time gesture tracking and landmark detection to execute seamless click and scroll functions. Optimized code execution and logic using advanced LLMs (Claude/Gemini) for faster debugging.

### Dynamic Event Management & Registration Platform

- **Technologies:** HTML, JavaScript, API Integration, Netlify
- **Key Deliverables:** Engineered a fully responsive user interface featuring complex thematic designs. Integrated client-side inputs with a cloud-based backend repository via the Google Sheets API for real-time, secure user registration logging.

## CAMPUS LEADERSHIP & COMMUNITY ENGAGEMENT

- **Technical Design Lead (Neuro-Verse Exhibition):** Spearheaded visual assets and promotional designs for the college's flagship project exhibition, managing technical layout standards across student project teams.
- **Tech Community Participant:** Actively engaged in professional developer workshops, including the **Google Developer Group (GDG) "Build with AI"** summit, exploring modern deployment tracks and foundational AI models.

## CORE COMPETENCIES

- **Full-Stack Mindset:** Capable of bridging the gap between dynamic user interfaces (React) and clean server-side logic (Node.js).

- **AI-Accelerated Development:** Skilled at leveraging generative AI tools (Grok, Claude, Gemini) to accelerate coding, write unit tests, and refactor code efficiently.
- **Strong Algorithmic Logic:** Solid foundation in writing memory-efficient, structured code in strongly-typed languages like Java and C++.
